

# Presso

## Plug-and-Play Attendance for Colleges

No Hardware. No Setup. Just Instant Attendance.

### ✗ What's broken with current systems?

- **Manual registers** are slow, error-prone, and hard to audit
- **Biometric devices** fail often and require costly setup
- **Spreadsheets** are messy and not real-time
- 🕒 **Manual attendance wastes 3–5 hours a week** for each professor — and it's still error-prone.

### ✓ The solution, Presso.

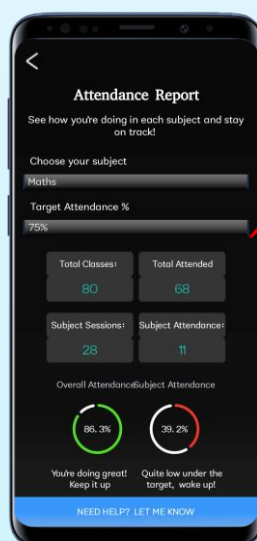

Presso is a lightweight mobile app designed for real-world classrooms.

Professors start attendance with a tap. Students nearby mark themselves present.

No biometric, no hardware, no setup. Just location + time-based logic — built for speed and accuracy.

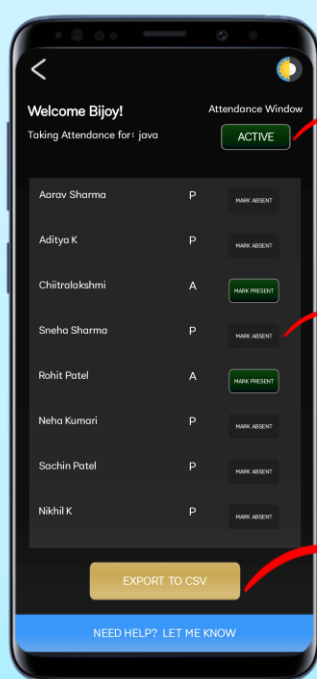

## Why Professors Choose Presso

- 📍 Location-based attendance
- 🕒 90-second attendance window (proxy-safe)
- 📊 Live present/absent view for professors
- 🔄 Auto daily reset — zero cleanup
- 📄 One-tap CSV export for records
- 📋 Personal attendance report for students
- 🔒 No login needed for students
- 💬 Direct developer support within the app
- 🌙 Dark & Light mode available

📋 Your record, your control. Check your stats before they check you.

## How it works

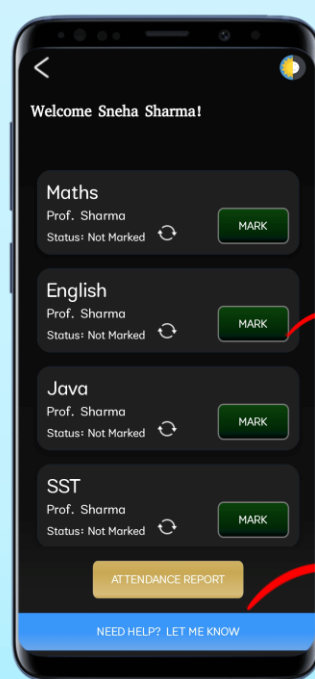

Begin attendance session. Students nearby can now mark themselves present. (Location is auto captured)

Toggle present/absent manually — just in case.

One tap to download all attendance data — no formatting needed.

Professor starts a 90-second (customizable) attendance session. Location is captured and shared instantly.

Students tap to mark themselves present — works only if you're within 50 meters of the professor.

View your attendance summary anytime — total, present, and percentage.

Students mark themselves **present** if within 50 meters of the professor — no login, no hassle.

## Have questions before the demo?

A detailed FAQ is attached — it covers how Presso works, what it needs (and doesn't), and common edge cases.

📧 **Want to schedule a demo?**

Just drop a date that works for you — preferably **anytime after the 18th.**
